About

Technical Skills C/C++, Java, Octave, Arduino/Arduino IDE, HTML, PCB Etching, EAGLE

Languages English, Hindi, Marathi, Konkani

Achievements and Personal Projects

'SHAASTRA' - IIT MADRAS (One of Asia's largest tech festivals) (December 2016-January 2017)

- Developed an autonomous 2-D maze solving robot, capable of traversing non-looped mazes and finding the shortest path from initial to final node. Used 'Left Hand on The Wall' Algorithm. Secured 4th Position in the event.
- Was a member of the team which was awarded 1st position in the 'Robowars' event, which involved building a heavy weight robot, capable of pinning or immobilizing the opponent's robot.

'QUARK' – BITS GOA (February 2018)

- Awarded the 2nd position at the National Level in the Line Following Event.
- Made a fully autonomous robot which traverses a line. Implemented PWM(Pulse Width Modulation) and PID(Proportional Integral Derivative) in order to improve stabilization and thus increase average speed.

BUILDATHON ROBOTICS CUP NATIONALS (January 2018)

- Won the Best Robot Model Award for designing an autonomous line following robot, which is able to identify obstacles, avoid them, and climb steep inclines.
- Used an arduino microcontroller, L293D motor driver and PWM to increase stability.

Electric Skateboard (July 2017)

- Single rear drive, wireless Electric Skateboard made with a brushless motor, 180 A ESC, custom welded motor mount. Controlled with a wireless 2.4Ghz controller. Capable of traversing on poorly maintained roads as well due to large ground clearance.

Quadcopter (March 2018)

- Carbon fibre frame, with provisions for mounting a camera and obtaining real time visual footage.
- Components included F3 flight controller, 20A optical ESCs, 4 Brushless Motors and a 2.4Ghz transmitter and receiver system. Configured using BetaFlight Configurator.

Designed and Etched PCB (April 2017)

- Single layered PCB using a copper clad board for mounting arduino nano and TB6612FNG motor driver in order to eliminate jumper wires and to achieve compactness.
- Designed the cicuit using EAGLECAD and etched using Ferric Chloride.

Robotics Instructor at LVE

- Introduced Robotics and Programming to 13 High School Students, and guided them to build their first robot.
- The project was a wireless android controlled robot, using arduino, L293D motor driver, and a HC-05 module.

LDR and Edge Detecting Robot (November 2015)

- Autonomous robot which moves in the direction of light. Components include a light dependent resistors, potentiometers and motors.
- Autonomous robot capable of detecting obstacles in it's path, as well as detecting edges on a plane surface. Components used were an ultrasonic distance sensor, an arduino and a motor driver.

Education

Mushtifund Aryaans Higher Secondary School Bambolim, GA (2019–Present)

Sharada Mandir School Miramar, GA (2016–2019)

- Graduated with 92.17% at the ISCE Examination
- Chairman's Special Award for academic excellence
